

Chapter 1: Introduction to the BBC Micro:bit

- | | |
|--------------------------------------|---------------------------------|
| 1. Buttons | 5. Ground pin |
| 2. LED display and light sensor | 6. Touch logo (V2 only) |
| 3. General-purpose input output pins | 7. LED for microphone (V2 only) |
| 4. 3 volt power pin | |

- | | | |
|-------------------------------------|------------------------|---------------------------------|
| 1. Radio and Bluetooth antenna | 6. Micro USB socket | 11. Speaker – V2 |
| 2. Processor and temperature sensor | 7. Single yellow LED | 12. Microphone – V2 |
| 3. Compass | 8. Reset button | 13. Red power LED – V2 |
| 4. Accelerometer | 9. Battery socket | 14. Yellow USB LED – V2 |
| 5. Pins | 10. USB interface chip | 15. Reset and power button – V2 |

Chapter 8: Exploring the Filesystem

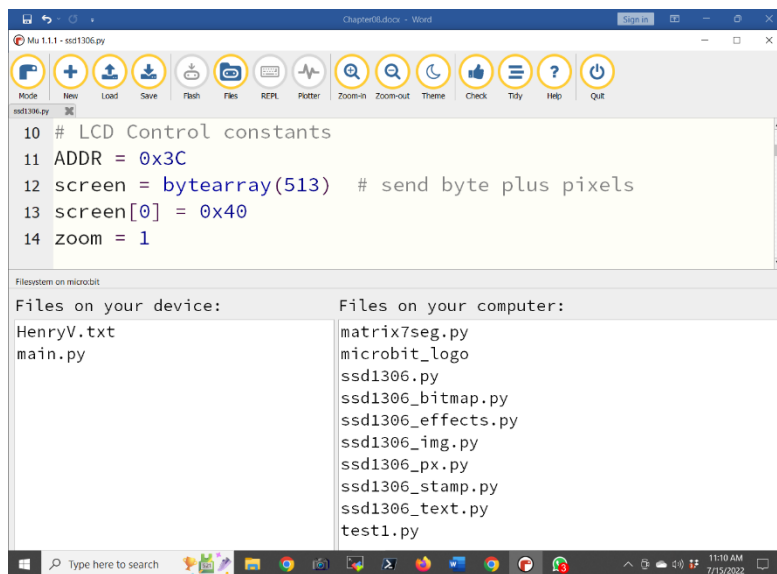

Thonny - D:\test.py @ 3:17

File Edit View Run Tools Help

The screenshot shows the Thonny IDE interface. On the left, the 'Files' pane displays a file explorer for 'This computer' at the path 'D:\ 34 Python RPi IoT \ CodeBundle \ Section20'. It lists several files: 'matrix7seg.py', 'prog01.py', 'prog02.py', 'prog03.py', 'prog04.py', 'prog05.py', 'prog06.py', and 'prog07.py'. Below this, the 'micro:bit' section is visible but empty. The main editor area has two tabs: 'prog13.py' and 'test.py'. The 'test.py' tab is active, showing a Python script with five lines of code. The script imports the 'microbit' module and enters a 'while True' loop that prints 'Test!' and sleeps for 1000 units of time. The 'Shell' pane at the bottom shows the output of the script, displaying 'Test!' eight times, indicating the loop has executed multiple times.

```
1 from microbit import *
2 while True:
3     print("Test!")
4     sleep(1000)
5
```

Test!

Python 3.10.5 (64-bit) Setup

Optional Features

☒ Documentation

Installs the Python documentation file.

☒ pip

Installs pip, which can download and install other Python packages.

☒ tk/tk and IDLE

Installs tkinter and the IDLE development environment.

☒ Python test suite

Installs the standard library test suite.

☒ py launcher ☒ for all users (requires elevation)

Installs the global 'py' launcher to make it easier to start Python.

Back

Next

Cancel

Advanced Options

- ☒ Install for all users
- ☒ Associate files with Python (requires the py launcher)
- ☒ Create shortcuts for installed applications
- ☒ Add Python to environment variables
- ☒ Precompile standard library
- ☒ Download debugging symbols
- ☒ Download debug binaries (requires VS 2017 or later)

Customize install location

C:\Program Files\Python310\

Chapter 13: Networking and Radio

fritzing

		
		
When both Micro:bits are on, A is displayed to both users. It's a much better way of indicating to them that they should press the A button.	User 1 and user 2 press the A button simultaneously and in this case, they both get a scissors.	Simultaneously, the result for each respective user is displayed. In this case, as they both got the same output (scissors), they see an asleep image, indicating a tie.

		
		
When both Micro:bits are on, A is displayed to both users. It's a much better way of indicating to them that they should press the A button.	User 1 and user 2 press the A button simultaneously and in this case, user 1 gets scissors and user 2 gets a rock.	Simultaneously, the result for each respective user is displayed. In this case, user 2 wins, as rock crushes scissors.
