

Chapter 1: Review of TCP/IP Protocol Suite and Python

OSI Model			
Layer	Protocol data unit (PDU)	Function	
Host Layers	7. Application	Data	High-level APIs, including resource sharing, remote file access
	6. Presentation		Translation of data between a networking service and an application; including character encoding, data compression, and encryption / decryption
	5. Session		Managing communication sessions, i.e. continuous exchange of Information in the form of multiple back-end-forth transmissions between two nodes
	4. Transport		Reliable transmission of data segments between points on a network, including segmentation, acknowledgement and multiplexing
Media Layers	3. Network	Packet	Structuring and managing a multi-node network, including addressing routing and traffic control
	2. Data link	Frame	Reliable transmission of data frames between two nodes connected by a physical layer
	1. Physical	Bit	Transmission and reception of raw bit streams over a physical medium

Chapter 2: Low-Level Network Device Interactions

Chapter 5: Docker Containers for Network Engineers

The screenshot shows the Docker Pricing & Subscriptions page. The page title is "Pricing & Subscriptions" with the subtitle "Choose one that's right for you." Below the title is a toggle switch for "monthly" (selected) and "annual".

There are four pricing plans displayed:

- Personal:** Ideal for individual developers, education, open source communities, and small businesses. Price: **\$0**. Features include Docker Desktop, unlimited public repositories, Docker Engine + Kubernetes, 200 image pulls per 6 hours, and unlimited scoped tokens. A "Start Now" button is at the bottom.
- Pro:** Includes pro tools for individual developers who want to accelerate their productivity. Price: **\$5 /month**. Features include everything in Personal plus Docker Desktop, unlimited private repositories, 5,000 image pulls per day, 5 concurrent builds, and 300 Hub vulnerability scans. A "Buy Now" button is at the bottom, with a note "Billed annually for \$60."
- Team:** Ideal for teams and includes capabilities for collaboration, productivity and security. Price: **\$7 /user/month** (Start with minimum 5 users for \$25). Features include everything in Pro plus Docker Desktop, unlimited teams, 15 concurrent builds, unlimited Hub vulnerability scans, add users in bulk, and audit logs. A "Buy Now" button is at the bottom, with a note "Billed annually starting at \$300."
- Business:** Ideal for medium and large businesses who need centralized management and advanced security capabilities. Price: **\$21 /user/month**. Features include everything in Team plus Docker Desktop, centralized management, registry access management, image access management, single sign-on (SSO), SCIM user provisioning, VDI support, purchase via invoice, and volume pricing available. A "Contact Sales" button is at the bottom, with a "Buy Now" link below it.

console graphs

Console -> Devices -> (Edit) Logged in as admin(Logout)

Device [new]

General Host Options

Description
Give this host a meaningful description.

Hostname
Fully qualified hostname or IP address for this device.

Host Template
Choose the Host Template to use to define the default Graph Templates and Data Queries associated with this Host.

Number of Collection Threads
The number of concurrent threads to use for polling this device. This applies to the Spine poller only.

Disable Host
Check this box to disable all checks for this host. ☐ Disable Host

Availability/Reachability Options

Downed Device Detection
The method Cacti will use to determine if a host is available for polling.
NOTE: It is recommended that, at a minimum, SNMP always be selected.

Ping Timeout Value
The timeout value to use for host ICMP and UDP pinging. This host SNMP timeout. Value applies for SNMP pings.

Ping Retry Count
After an initial failure, the number of ping retries Cacti will attempt before failing.

SNMP Options

SNMP Version
Choose the SNMP version for this device.

SNMP Community
SNMP read community for this device.

SNMP Port **SNMP Timeout**
Enter the UDP port number to use for SNMP (default is 161).

Maximum OID's Per Get Request
Specified the number of OID's that can be obtained in a single SNMP Get request.

Additional Options

Notes
Enter notes to this host.

Cancel Create

Chapter 10: Introduction to Async IO

```
async def main():  
    print('Hello ...')  
    await asyncio.sleep(1)  
    print('... World!')  
    await asyncio.sleep(2)  
    print('... and again.')
```

Coroutine

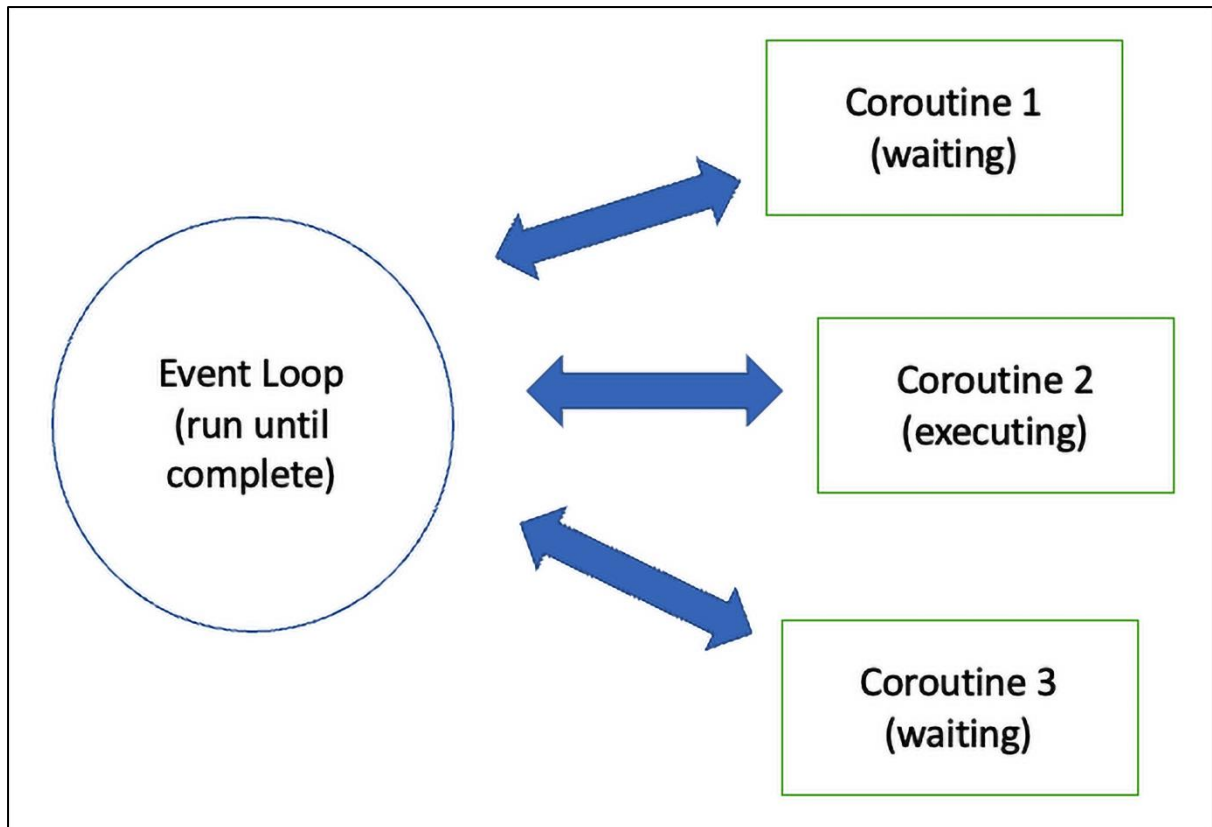

Work that is waiting

```
import asyncio  
  
async def count():  
    print("One")  
    await asyncio.sleep(1)  
    print("Two")  
  
async def main():  
    await asyncio.gather(count(), count(), count())  
  
if __name__ == "__main__":  
    import time  
    s = time.perf_counter()  
    asyncio.run(main())  
    elapsed = time.perf_counter() - s  
    print(f"Completed in {elapsed:0.2f} seconds.")
```

Awaitable Task

Gather all the coroutines

Event Loop, run until complete

AWS Free TierOverviewFAQsTerms and Conditions

AWS Free Tier

Gain free, hands-on experience with the AWS platform, products, and services

[Learn more about AWS Free Tier](#)

Create a Free Account

FEATURED

Startups may be eligible for AWS credits

AWS Activate provides eligible startups with a host of resources, including free AWS credits to spend on AWS services, and AWS Support.

[Sign up for Activate Today »](#)

Types Of Offers

Explore more than 100 products and start building on AWS using the Free Tier. Three different types of free offers are available depending on the product used. Click icon below to explore our offers.

Free trials

Short-term free trial offers start from the date you activate a particular service

12 months free

Enjoy these offers for 12-months following your initial sign-up date to AWS

Always free

These free tier offers do not expire and are available to all AWS customers

EQUINIX CLOUD EXCHANGE™ FABRIC

Software-defined interconnection

Flexible, On-Demand, Global Interconnection

Equinix Cloud Exchange™ Fabric directly, securely and dynamically connects distributed infrastructure and digital ecosystems on Platform Equinix™ Via global, software-defined interconnection.

Available across 25+ location, ECX Fabric is designed for scalability, agility and connectivity over a self-service portal or API. Through a single port, discover and reach anyone on demand, locality or across metros.

Comparison of Elastic Load Balancing Products

You Can select the appropriate load balancer based on your application need. If you need flexible application management, we recommend that you use an **Application Load Balancer**. If extreme performance and static IP is needed for your application, we recommend that you use a **Network Load Balancer**. If you have an existing application that was built within the EC2-Classic network, then you should use a **Classic Load Balancer**.

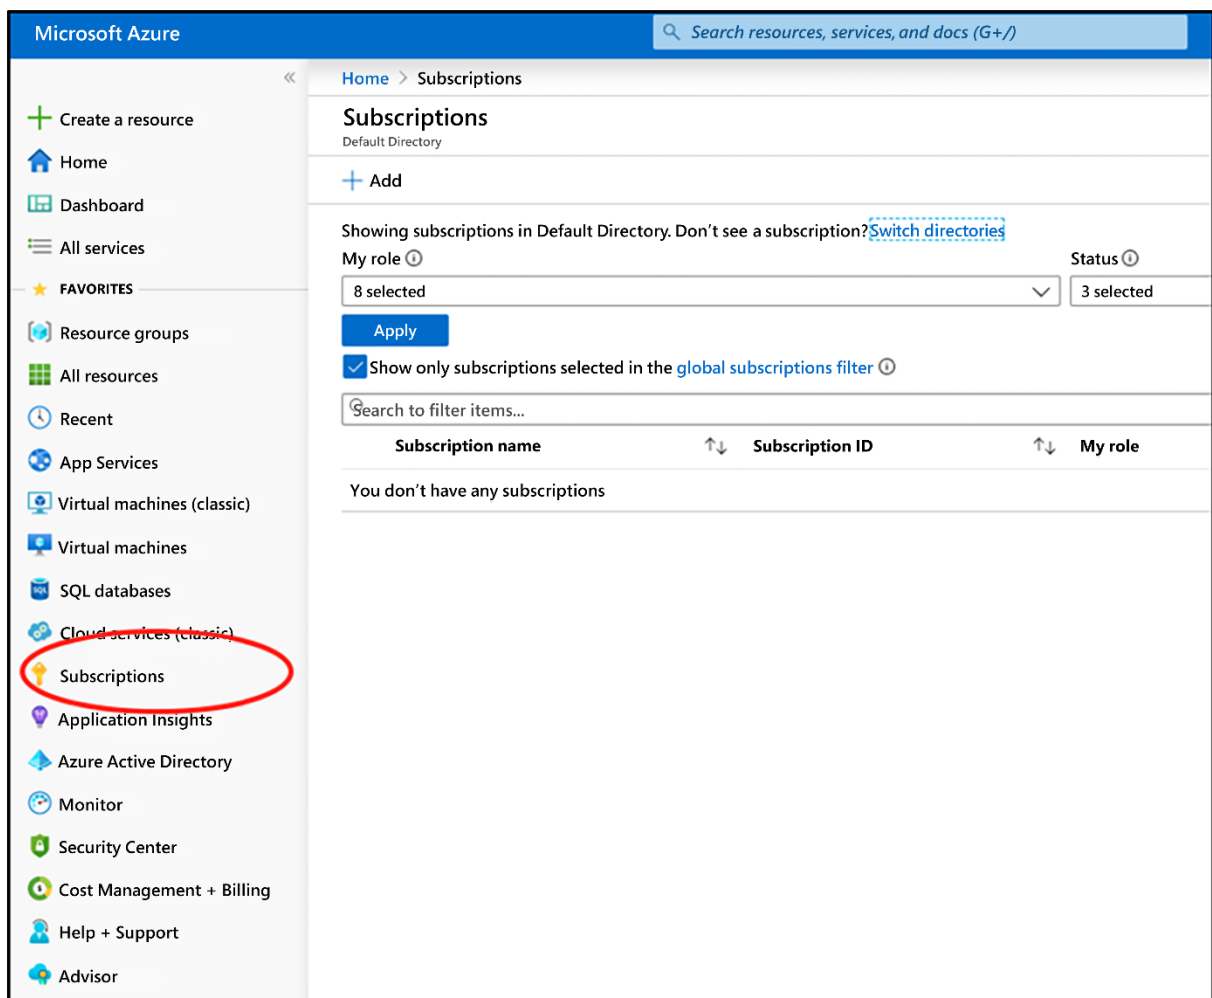

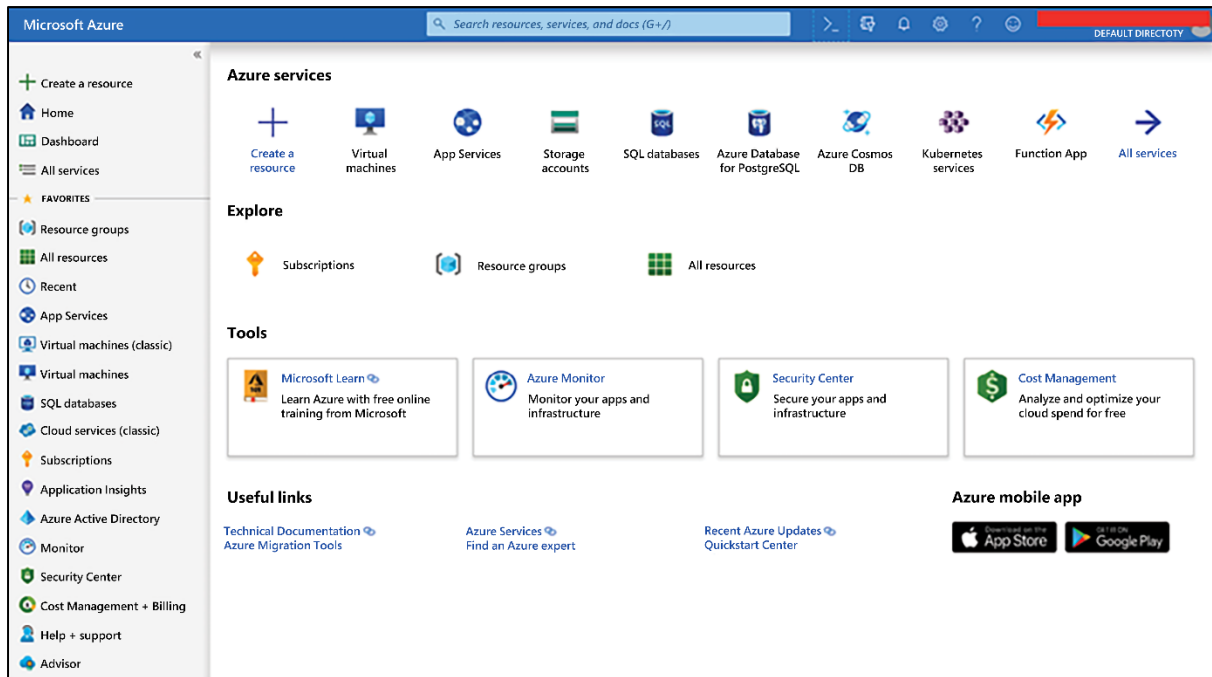

Features	Application Load Balancer	Network Load Balancer	Classic Load Balancer

Chapter 12: Azure Cloud Networking

Networking

Area	AWS service	Azure service	Description
Cloud virtual networking	Virtual Private Cloud (VPC)	Virtual Network	Provides an isolated, private environment in the cloud. Users have control over their virtual networking environment, including selection of their own IP address range, creation of subnets, and configuration of route tables and network gateways.
Cross-premises connectivity	AWS VPN Gateway	Azure VPN Gateway	Connects Azure virtual networks to other Azure virtual networks, or customer on-premises networks (Site To Site). Allows end users to connect to Azure services through VPN tunneling (Point To Site).
DNS management	Route 53	Azure DNS	Manage your DNS records using the same credentials and billing and support contract as your other Azure services
	Route 53	Traffic Manager	A service that hosts domain names, plus routes users to Internet applications, connects user requests to datacenters, manages traffic to apps, and improves app availability with automatic failover.
Dedicated network	Direct Connect	ExpressRoute	Establishes a dedicated, private network connection from a location to the cloud provider (not over the Internet).
Load balancing	Network Load Balancer	Load Balancer	Azure Load Balancer load-balances traffic at layer 4 (TCP or UDP).
	Application Load Balancer	Application Gateway	Application Gateway is a layer 7 load balancer. It supports SSL termination, cookie-based session affinity, and round robin for load-balancing traffic.

The image shows the Microsoft Azure website's landing page. At the top, there's a navigation bar with the Microsoft Azure logo, contact information, and links for 'My account', 'Portal', and 'Sign in'. Below this is a secondary navigation bar with links for 'Overview', 'Solutions', 'Products', 'Documentation', 'Pricing', 'Training', 'Marketplace', 'Partners', 'Support', 'Blog', and 'More'. The main headline reads 'Create your Azure free account today' with a sub-headline 'Get started with 12 months of free services'. A prominent green 'Start free >' button is centered, with a smaller 'Or buy now >' link below it. Below the main content area, there's a preview of the Azure portal interface. This preview shows the 'Azure services' section with icons for Virtual machines, App Services, Storage accounts, SQL databases, Azure DevOps for Project/CICD, Azure Cosmos DB, Kubernetes services, and Function Apps. It also features a 'Recent resources' table with columns for NAME, TYPE, and LAST VIEWED, listing items like 'PowerShell', 'PublicKey', 'LinuxVM', 'SampleVM', and 'Database'. On the right side of the preview, there are 'Useful links' for Technical Documentation, Azure Services, Recent Azure updates, Azure Migration Tools, and an 'Azure mobile app' download button for the App Store.

Subnets

WEST-US-2_VNet_1_Subnet_1

With service endpoints, the source IP address for service traffic from this subnet will switch from using public IPv4 addresses to using private IPv4 address. Existing IP firewall rules using Azure public IP addresses will stop working with this switch. Please ensure IP firewall rules allow for this switch before setting up service endpoints. You may also experience temporary interruption to service traffic from this subnet while configuring service endpoints.

Route tables

Create View

Description

Create a route table when you need to override Azure's default routing. For example, you can route traffic to a network virtual appliance or to your on-premises network for inspection. A route table contains routes and is associated to one or more subjects.

 ELASTIC CLOUD

Elasticsearch-Powered SaaS Offerings

Elastic Cloud is our growing family of SaaS offerings that make it easy to deploy, operate, and scale Elastic products and solutions in the cloud. From an easy-to-use hosted and managed Elasticsearch experience to powerful, out-of-the-box search solutions, Elastic Cloud is your springboard for seamlessly putting Elastic to work for you.

Elasticsearch Service

Easily spin up deployment on AWS, GCP or Azure with Kibana and features you can't get anywhere else.

Chapter 14: Working with Git

Create a new repository
A repository contains all the files for your project, including the revision history.

Owner: **ericchou1** / Repository name: **TestRepo** ✓

Great repository names are short and memorable. Need inspiration? How about **refactored-telegram**.

Description (optional):
Chapter 11 TestRepo for Mastering Python Networking Second Edition

☐ **Public**
Anyone can see this repository. You choose who can commit.

☒ **Private**
You choose who can see and commit to this repository.

☒ **Initialize this repository with a README**
This will let you immediately clone the repository to your computer. Skip this step if you're importing an existing repository.

Add .gitignore: **Python** | Add a license: **MIT License** ⓘ

Chapter 15: Continuous Integration with GitLab

 Docs

What's new? 15.5 ~ [Get free trial](#)

Agile with GitLab

Manage your work with built-in agile features.

- Issues
- Issue boards
- Labels

CI/CD

Build, test, and deploy applications using Continuous Integration and Delivery.

- GitLab CI/CD
- GitLab Runner
- Auto DevOps

Collaboration

Configure and develop your software applications.

- Projects
- Repositories
- Merge requests

Security

Scan your CI pipeline and streamline vulnerability management.

- Secure your application
- Vulnerability management
- Offline environments

Analytics

View reports and analysis of your team's work.

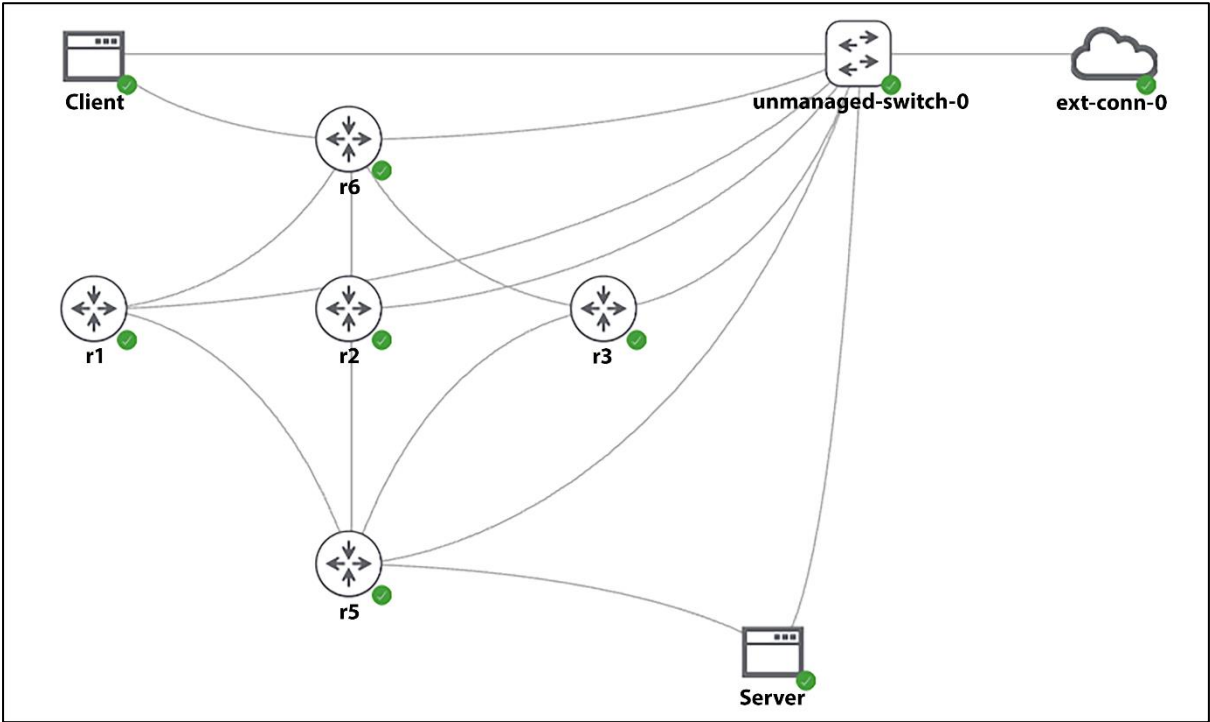

- Value stream analytics
- Issue analytics
- Usage trends

Administration

Customize and configure your self-managed installation.

- Admin area settings
- Set up LDAP
- GitLab Pages

Thank you for installing GitLab!

GitLab should be available at [http://\[redacted\]](http://[redacted])

For a comprehensive list of configuration options please see the Omnibus GitLab readme
<https://gitlab.com/gitlab-org/omnibus-gitlab/blob/master/README.md>

Help us improve the installation experience, let us know how we did with a 1 minute survey:
https://gitlab.fra1.qualtrics.com/jfe/form/SV_6kVqZANTuQ1bZb?installation=omnibus&release=14-5

The screenshot shows the GitLab Admin Area Dashboard. The left sidebar contains navigation links for Admin Area, Overview, Dashboard, Projects, Users, Groups, Topics, Jobs, Runners, GitLab Servers, Analytics, Monitoring, Messages, System Hooks, Applications, Abuse Reports (0), Subscription, Kubernetes, Geo, Deploy Keys, Labels, and Settings. The main content area is titled 'Instance overview' and contains several widgets:

- Projects:** 14 PROJECTS. Includes a 'New project' button and a link to 'View latest projects >'.
- Users:** 8 USERS. Includes a 'New user' button and a link to 'View latest users >'.
- Groups:** 2 GROUPS. Includes a 'New group' button and a link to 'View latest groups >'.
- Statistics:** A table showing various metrics:

Metric	Count
Forks	0
Issues	2
Merge requests	3
Notes	15
Snippets	0
SSH Keys	2
Milestones	2
Active Users	6
- Features:** A list of features with status indicators (on/off/checked):

Feature	Status
Sign up	On
LDAP	On
Gravatar	Checked
OmniAuth	Checked
Reply by email	On
Advanced Search	On
Geo	On
Container Registry	On
GitLab Pages	On
Shared Runners	Checked
- Components:** A table listing installed components and their versions:

Component	Version
GitLab	14.6.2-ee
GitLab Shell	13.22.1
GitLab Workhorse	v14.6.2
GitLab API	v4
Ruby	2.7.5p203
Rails	6.1.4.1
PostgreSQL	12.7
Redis	6.0.16

SMTP settings

ALL TIERS SELF-MANAGED

If you would rather send application email via an SMTP server instead of via Sendmail or Postfix, add the following configuration information to `/etc/gitlab/gitlab.rb` and run `gitlab-ctl reconfigure`.

⚠ Your `smtp_password` should not contain any String delimiters used in Ruby or YAML (f.e. `'`) to avoid unexpected behavior during the processing of config settings.

There are [example configurations](#) at the end of this page.

```
gitlab_rails['smtp_enable'] = true
gitlab_rails['smtp_address'] = "smtp.server"
gitlab_rails['smtp_port'] = 465
gitlab_rails['smtp_user_name'] = "smtp user"
gitlab_rails['smtp_password'] = "smtp password"
gitlab_rails['smtp_domain'] = "example.com"
gitlab_rails['smtp_authentication'] = "login"
gitlab_rails['smtp_enable_starttls_auto'] = true
gitlab_rails['smtp_openssl_verify_mode'] = 'peer'

# If your SMTP server does not like the default 'From: gitlab@localhost' you
# can change the 'From' with this setting.
gitlab_rails['gitlab_email_from'] = 'gitlab@example.com'
gitlab_rails['gitlab_email_reply_to'] = 'noreply@example.com'
```

SSH Keys

SSH keys allow you to establish a secure connection between your computer and GitLab.

Add an SSH key

To add an SSH key you need to [generate one](#) or use an [existing key](#).

Key

Paste your public SSH key, which is usually contained in the file '~/.ssh/id_ed25519.pub' or '~/.ssh/id_rsa.pub' and begins with 'ssh-ed25519' or 'ssh-rsa'. Do not paste your private SSH key, as that can compromise your identity.

Typically starts with "ssh-ed25519 ..." or "ssh-rsa ..."

Title

Expiration date

e.g. My MacBook key

mm/dd/yyyy

Give your individual key a title. This will be publicly visible.

Key can still be used after expiration.

Add key
