Type Sandbox	Application Insights Connection String (?) Not Set (Define)	Security Group Not Set (Define)	

Rename environment (Preview)

Sandbox

Enter a new name for this environment. The environment name is part of the environment's URL, which uniquely identifies this environment among your other environments. You can always change back to the original name later on if you want to.

Caution: Changing the environment name requires a restart to the environment. We recommend doing this when no users are active in Business Central.

Visit Rename Environment to find out more about this operation and its considerations.

New environment name: *

[   ]

Do not add personal data to the environment name as this is not treated as restricted data.

Delete environment

This will remove the selected environment and all data for the environment. You will not be able to get the data back after deleting. Are you sure you want to continue with deleting this environment?

Environment type: **Production**, Environment name: **Production**

Yes   No

Microsoft

Dynamics 365 Business Central

Get ready to receive a new Business Central update. Oh yes, we think you'll like it!

A new update is available for Business Central. We have scheduled the updates to start on the date specified below.

Updates will automatically start:	On or after 6/5/2022
Last day to apply update:	6/16/2022 (UTC)
Scheduled time:	Between 8:00:00 AM and 2:00:00 PM (UTC)

Microsoft

Dynamics 365 Business Central

Your updated Business Central is ready

Business Central has been successfully updated. Sign into the environment to verify the update and check out the new capabilities.

Your service identifier (Tenant):	CRMbc369836-APICreate
Environment:	APICreate
Version before update:	20.0
Version after update:	20.1
Completed date:	5/26/2022 8:16:48 AM (UTC)

Microsoft

Dynamics 365 Business Central

Your Business Central was not updated

Business Central was not updated on your scheduled date and time. We apologize and have rescheduled your update for seven days from now. You will receive another notification with the rescheduled date and time. If the scheduled date or time is inconvenient for your business, you can easily reschedule the update.

Your service identifier (Tenant):	
Environment:	
Version before update:	19.5
Version after update:	20.0
Scheduled date (missed):	4/21/2022 (UTC)

Microsoft

Dynamics 365 Business Central

Your extension needs updating

We have made improvements in the next update of Business Central, and we are eager to make the update available for you.

However, our last automatic extension validation check indicates that the ███████ App extension that is installed in the Dynamics 365 Business Central environment for ████-███ is not compatible with version 20.1.38742.0.

The compatibility issue must be resolved before the environment for which the extension is installed can be successfully updated to version 20.1.38742.0.

Set update window

Production

The update window is the time of day when updates may be applied to the environment. During the update the environment will not be available.

Select the update window in your local time.

Managing change

Some new features are turned off when Dynamics 365 Business Central is updated to a newer version. These features are optional for a period of time until they are automatically enabled for all users in a later software update.

You can prepare in advance by enabling these features for all users on the right environment at the right time that suits your schedule.

Learn more about feature management.

Set Application Insights Connection String

Enter the connection string for the Azure Monitor Application Insights resource, which you can get from the Azure Portal. This enables Business Central to send telemetry from this environment to Application Insights in Azure.
Go to Enable Sending Telemetry to Application Insights for more information.

Caution: Applying this connection string requires a restart to the environment. We recommend doing this when no users are active in Business Central.

Usage Charts

Billable data ingestion per solution (last 31 days)

Lotus Change Request 1.6.docx [только

Data ingested per solution (last 90 days)

Category	Usage
LogManagement	860 MB

Data Retention   ✕

31 days of retention is included with your pricing plan. Longer retention will incur additional charges. Retention can also be configured individually for specific data types.

Data Retention (Days)

◯━━━━━━━━━━━━━━━━━━━━━━━━   30

Retention for Application Insights data types default to 90 days and will get the workspace retention if it is over 90 days. To set the retention on these types to be less than 90 days, set the retention on each of these data types. Learn more.

OK

Daily cap ✕

You can control your costs by applying a cap to the amount of data that you collect per day. Note that there can be some latency in applying the daily cap, so stopping data ingestion precisely at the specified cap cannot be guaranteed. The collection of security-related data types by Azure Sentinel or Azure Security Center (using the current pricing model) is not affected by this daily cap. (For workspaces on which Azure Security Center was enabled before June 19, 2017, security data types are capped like other data types.) Learn more ↗

`[ ON  |  OFF ]`

⚠ Be sure to create an alert so you know if your workspace is capped. Learn more

The daily volume cap is:

| | GB/day
|---|

Daily limit will be set at: `00:00 UTC`

OK

Chapter 5: Reported Outages and Operations

Report Production Outage

Fill out the form below to report an outage on this environment. This should only be used if you are experiencing an outage on a Production environment that cannot be mitigated by restarting the environment from the environment's Manage Sessions page. If you are experiencing an issue that is not an outage, please create a new support request from the Power Platform admin center.

Environment Name: Production

Application Family: Business Central

⚠ Starting November 9th, 2020 end users will no longer be able to grant consent to newly

ℹ The "Admin consent required" column shows the default value for an organization. Howe organization, or in organizations where this app will be used. Learn more

Configured permissions

Applications are authorized to call APIs when they are granted permissions by users/admi all the permissions the application needs. Learn more about permissions and consent

+ Add a permission   ✓ Grant admin consent for Contoso

Request API permissions

Select an API

Microsoft APIs   APIs my organization uses   My APIs

Commonly used Microsoft APIs

Microsoft Graph

Take advantage of the tremendous amount of data in Office 365, Enterprise Mobility + Security, and Windows 10. Access Azure AD, Excel, Intune, Outlook/Exchange, OneDrive, OneNote, SharePoint, Planner, and more through a single endpoint.

Azure Communication Services

Rich communication experiences with the same secure CPaaS platform used by Microsoft Teams

Azure Rights Management Services

Allow validated users to read and write protected content

Azure Service Management

Programmatic access to much of the functionality available through the Azure portal

Data Export Service for Microsoft Dynamics 365

Export data from Microsoft Dynamics CRM organization to an external destination

Dynamics 365 Business Central

Programmatic access to data and functionality in Dynamics 365 Business Central

Dynamics CRM
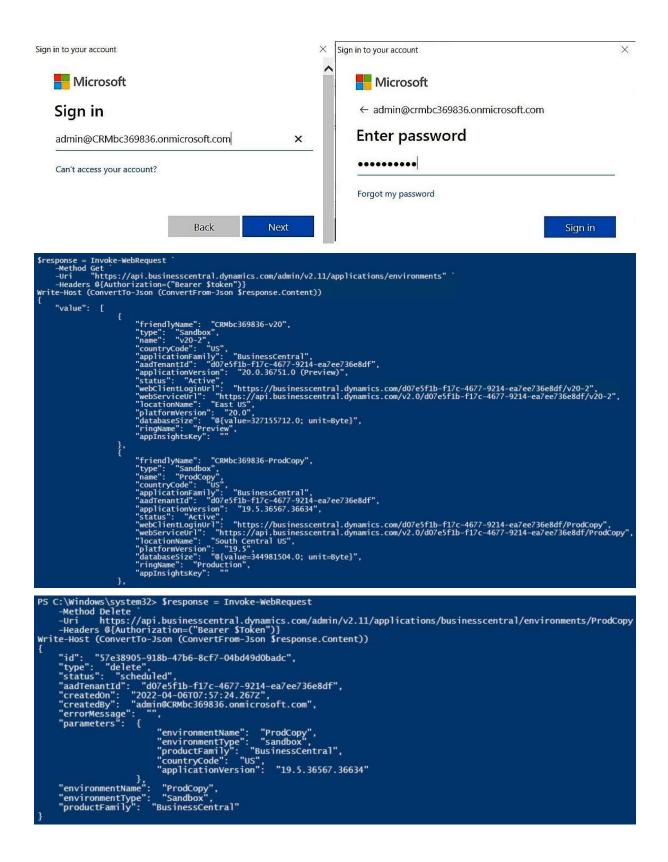

Access the capabilities of CRM business software and ERP systems

What type of permissions does your application require?

Delegated permissions
Your application needs to access the API as the signed-in user.

Application permissions
Your application runs as a background service or daemon without a signed-in user.

Select permissions   expand all

🔍 Start typing a permission to filter these results

ℹ️ The "Admin consent required" column shows the default value for an organization. However, user consent can be customized per permission, user, or app. This column may not reflect the value in your organization, or in organizations where this app will be used. Learn more   ✕

Cloud Migration Setup

⚙

Instructions

The data migration requires an integration runtime service. The runtime service provides a connection between your on-premises solution and your Business Central cloud tenant.

1. Download the Self-hosted Integration Runtime

2. Install the integration runtime on your on-premises database server

3. Use the authentication key below to set up your integration runtime

4. Choose Next to verify all the connections are working

Authentication Key: · · · · · · · · · · · · · | IR@edc1991e-f215-423e-9f94-eedb6c6cb762@

| | Back | Next | Finish |

```
1    table 50117 "AWR_Sales Invoice Line clone"
2    {
3        Caption = 'Sales Invoice Line';
4        Permissions = TableData "Item Ledger Entry" = r,
5                      TableData "Value Entry" = r;
6        ReplicateData = false;
7
```

Delegated admin consent for cloud migration

✔ Grant Consent   ✖ Revoke Consent

Your external partner admin requires your consent to run the cloud migration on your behalf. To grant the consent, choose the Grant Consent action. You can revoke the consent at any time by choosing the Revoke Consent action. If you revoke consent, the cloud migration stops.

Cloud Migration Setup

⚙️

Choose Your Product

Select the product that you want to migrate data from

Product ························   Dynamics 365 Business Central earlier v...   ···

Use this option if your on-premises deployment of Dynamics 365 Business Central is an earlier major version than this Dynamics 365 Business Central online environment. Because they are not the same version, the migration first copies the data and then runs the upgrade processes. Due to the upgrade processes, we recommend that you run the migration only once.

Back   Next   Finish

0	0
Tables Remaining	Tables with Warnings

5. Enable & Scheduling Migration

The final page in the wizard allows you to enable the migration process and create a schedule for when the data migration should occur. These settings are also available within your Business Central tenant on the **Cloud Migration Management** page. You have the option to schedule migrations daily or weekly.

> 💡 **Tip**
>
> We recommend that you schedule your data migration for off-peak business hours since it can take many hours to run, depending on the amount of data.
>
> We also recommend that you make sure that all users are logged out of both the source company and the target company.

```
