MongoDB Database Tools

The MongoDB Database Tools are a collection of command-line utilities for working with a MongoDB deployment. These tools release independently from the MongoDB Server schedule enabling you to receive more frequent updates and leverage new features as soon as they are available. See the [MongoDB Database Tools](#) documentation for more information.

Cluster Tier

M0 Sandbox (Shared RAM, 512 MB Storage) ▼

Encrypted

Base hourly rate is for a MongoDB replica set with 3 data bearing servers.

Shared Clusters for development environments and low-traffic applications

Tier	RAM	Storage	vCPU	Base Price
✓ M0 Sandbox	Shared	512 MB	Shared	Free forever
M0 clusters are best for getting started, and are not suitable for production environments.				
500 max connections Low network performance 100 max databases 500 max collections				
M2	Shared	2 GB	Shared	\$9 / MONTH
M5	Shared	5 GB	Shared	\$25 / MONTH

Additional Settings

MongoDB 5.0, No Backup ▼

Turn on Backup (M2 and up)

[See Backup Solutions for Paid Clusters \(M2+\)](#)

Cluster Name

farm-cluster ▼

One time only: once your cluster is created, you won't be able to change its name.

farm-cluster

Cluster names can only contain ASCII letters, numbers, and hyphens.

FREE

Free forever! Your M0 cluster is ideal for experimenting in a limited sandbox. You can upgrade to a production cluster anytime.

[Back](#)

Create Cluster

Add New Database User

Create a database user to grant an application or user, access to databases and collections in your clusters in this Atlas project. Granular access control can be configured with default privileges or custom roles. You can grant access to an Atlas project or organization using the corresponding [Access Manager](#) 

Authentication Method

Password

Certificate

AWS IAM
(MongoDB 4.4 and up)

MongoDB uses [SCRAM](#) as its default authentication method.

Password Authentication

freethrow

SHOW

 Autogenerate Secure Password

 Copy

Database User Privileges

Configure role based access control by assigning database users a mix of one built-in role, multiple custom roles, and multiple specific privileges. A user will gain access to all actions within the roles assigned to them, not just the actions those roles share in common. **You must choose at least one role or privilege.** [Learn more about roles.](#)

Built-in Role

1 SELECTED

Select one [built-in role](#) for this user.

Read and write to any database ▼

Custom Roles

Select your [pre-defined custom role\(s\)](#). Create a custom role in the [Custom Roles](#) [tab](#).

Specific Privileges

Select multiple privileges and what database and collection they are associated with. Leaving collection blank will grant this role for all collections in the database.

Restrict Access to Specific Clusters/Data Lakes

Enable to specify the resources this user can access. By default, all resources in this project are accessible.

OFF

Temporary User

This user is temporary and will be deleted after your specified duration of 6 hours, 1 day, or 1 week.

ddylwyyjvMF

Default Public ID:

Random string (default)

The method to use for assigning a Public ID to an uploaded asset if no Public ID has been specified directly.

Upload presets:

Enable unsigned uploading

Simplify your image uploading procedure by enabling users to upload images and other assets into your Cloudinary account without pre-signing the upload request. For security reasons, unsigned uploads require using an upload preset.

Name	Mode	Settings
FARM	Signed	<div>Overwrite: true</div> <div>Unique filename: true</div> <div>Delivery type: upload</div> <div>Access mode: public</div> <div>Eager Transformations:</div> <div>c_scale,e_sepia:67,q_jpegmini:1,w_600</div> <div>Folder: FARM Auto tagging: 0.7</div>

Add upload preset

Upload presets allow you to define the default behavior for your uploads, instead of receiving these as parameters during the upload request itself. Parameters can include tags, incoming or on-demand transformations, notification URL, and more. Upload presets have precedence over client-side upload parameters.

API upload preset defaults:
