Feedback

Assuming that you make 1000 trades with this strategy, here's how the math works out:

- You win 75% of the time, so you win on 750 trades.
- Your winnings on each of these 750 trades is \$1, so your total winnings are $750 \times \$1 = \750 .
- You lose 25% of the time, so you lose on 250 trades.
- Your losses on each of these 250 trades is \$10, so your total losses are $250 \times \$10 = \$2,500$.
- Your net profit is your total winnings minus your total losses, which is $\$750 - \$2,500 = -\$1,750$.

So, even though you have a 75% win rate, your losses are much greater than your winnings, and you end up with a net loss of \$1,750 over 1000 trades. It's important to remember that win rate alone does not determine profitability in trading. You also need to consider the size of your wins and losses and the frequency of each.

A 20% win rate strategy where you win \$10 20% of the time and you lose \$1 80% of the time over 1000 trades.

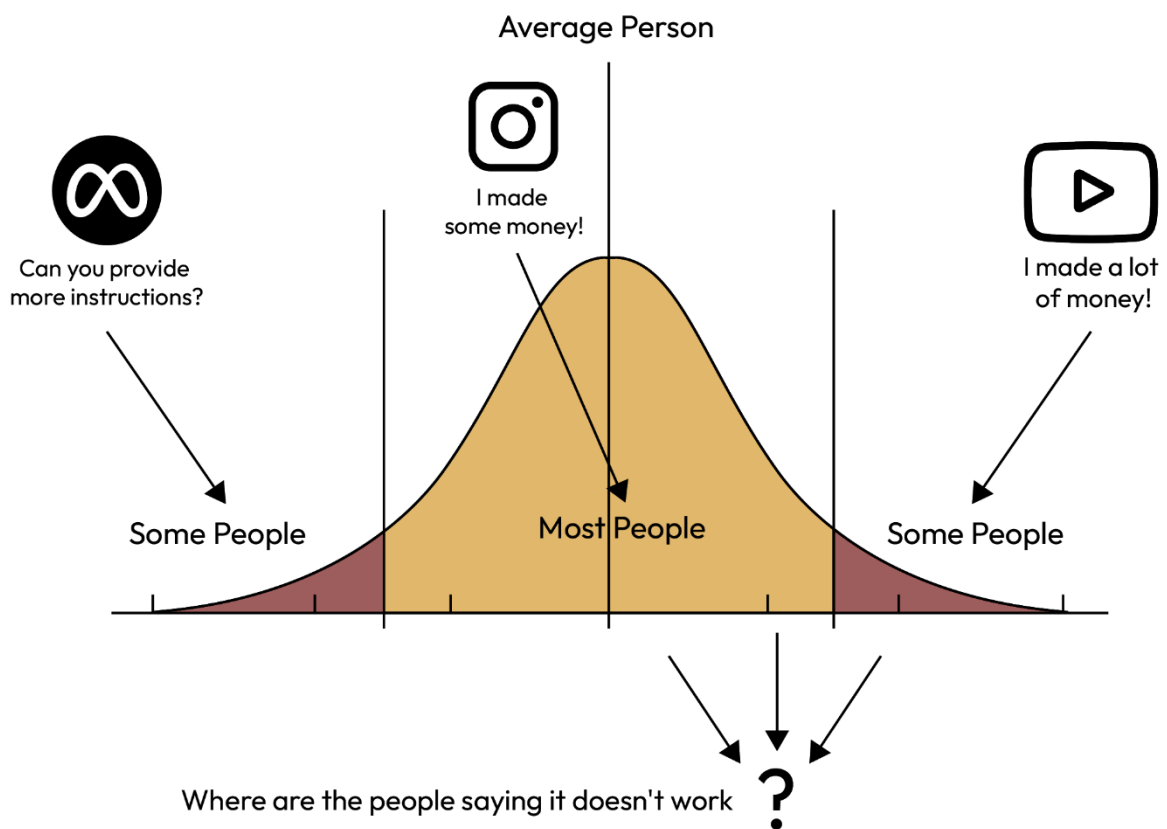

Assuming that you make 1000 trades with this strategy, here's how the math works out:

- You win 20% of the time, so you win on 200 trades.
- Your winnings on each of these 200 trades is \$10, so your total winnings are $200 \times \$10 = \$2,000$.
- You lose 80% of the time, so you lose on 800 trades.
- Your losses on each of these 800 trades is \$1, so your total losses are $800 \times \$1 = \800 .
- Your net profit is your total winnings minus your total losses, which is $\$2,000 - \$800 = \$1,200$.

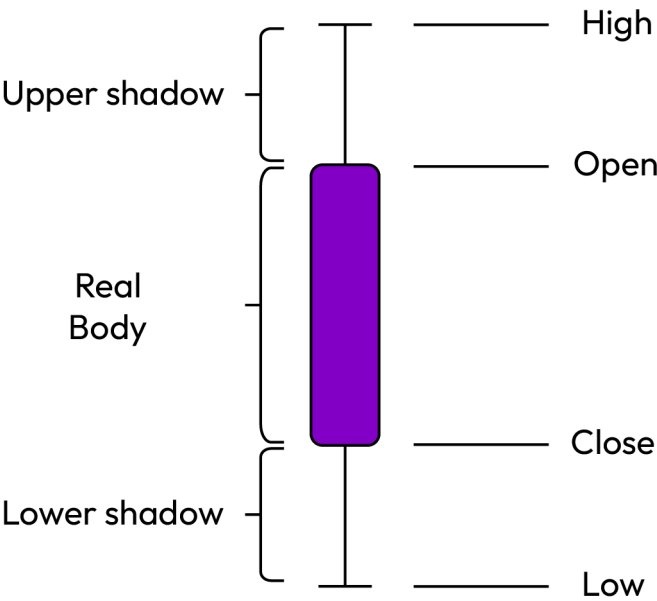

So, even though you have a lower win rate of 20%, your profitable trades have a much higher payout than your losing trades, and you end up with a net profit of \$1,200 over 1000 trades. It's important to note that this is just an example and trading involves risks, and historical performance is not a guarantee of future results. Proper risk management and strategy are necessary for success in trading.

Echo Chambers

Psychology Of Market Cycle

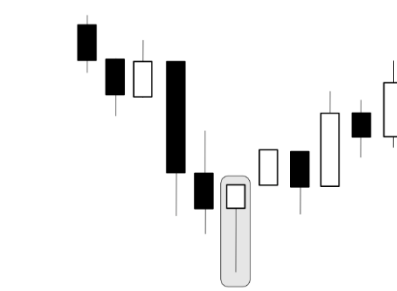

Hammer (bullish)

Reality:

Pattern

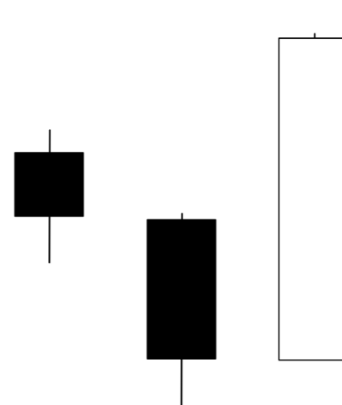

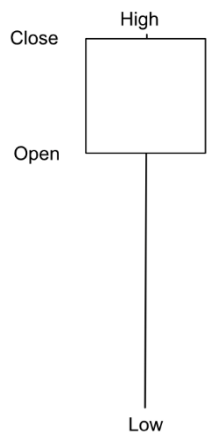

Conditions:

- occurs after a price decline
- lower wick (tail) > 2x candle body
- candle can be bullish (preferred) or bearish

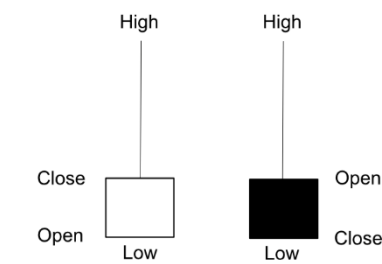

Chart

How a Hammer is formed

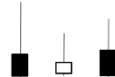

Inside the Hammer

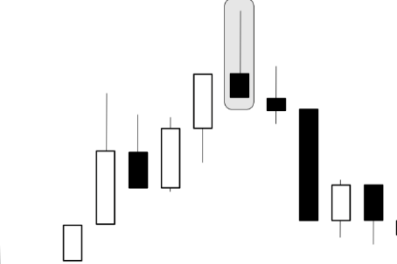

Shooting Star (bearish)

Reality:

Pattern

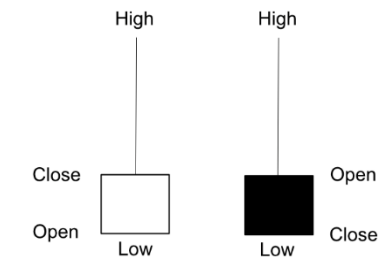

Conditions:

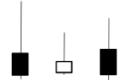

- occurs after a price increase
- upper wick (shadow) > 2x candle body
- candle can be bearish (preferred) or bullish

Chart

Inverted Hammer (bullish)

Reality:

Pattern

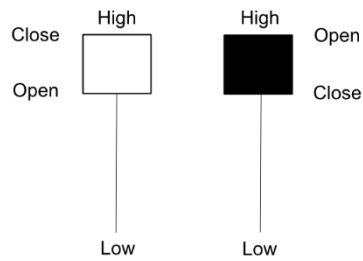

Conditions:

- occurs after a price decline
- upper wick (shadow) > 2x candle body
- candle can be bullish (preferred) or bearish

Chart

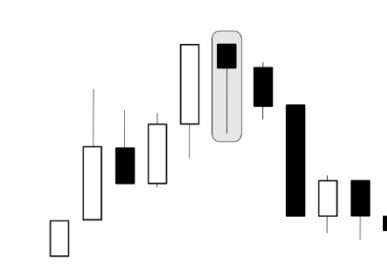

Hanging Man (bearish)

Reality:

Pattern

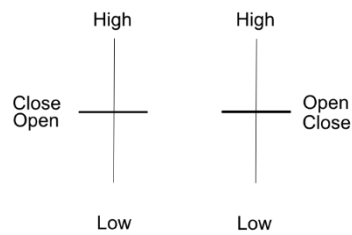

Conditions:

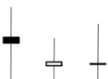

- occurs after a price increase
- lower wick (tail) > 2x candle body
- candle can be bearish (preferred) or bullish

Chart

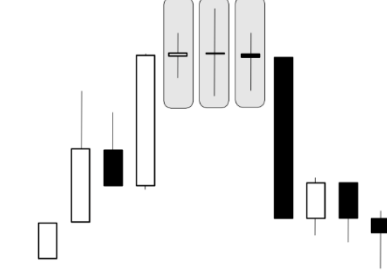

Doji (neutral)

Reality:

Pattern

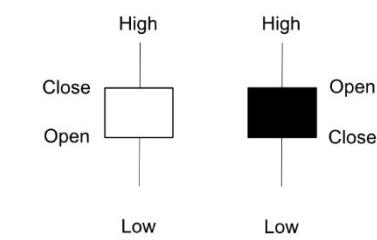

Conditions:

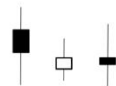

- open and close are very close to one another and in the middle region of the wick
- candle body is very small and can be bullish or bearish

Chart

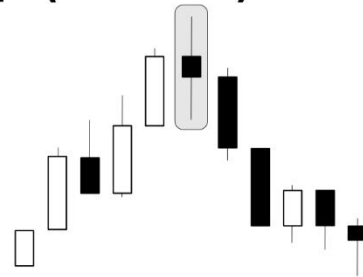

Spinning Top (neutral)

Reality:

Pattern

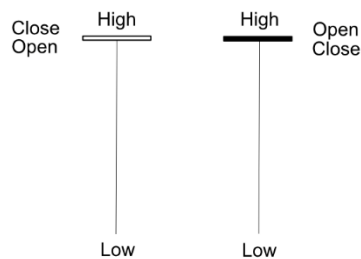

Conditions:

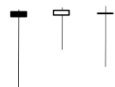

- a Doji with a bigger body
- can be bullish or bearish
- occurs after a price increase or decrease

Chart

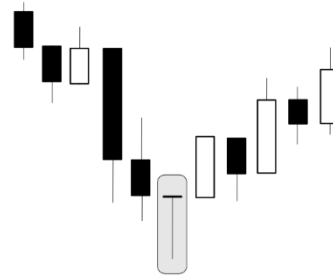

Dragonfly Doji (bullish)

Reality:

Pattern

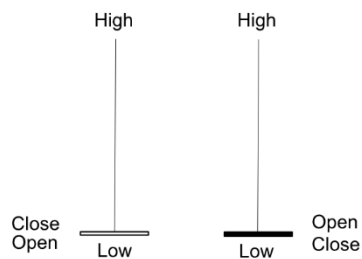

Conditions:

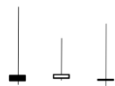

- occurs after a price decline
- it's a Hammer with a smaller candle body

Chart

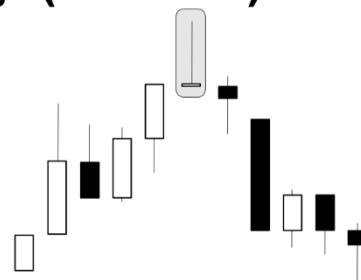

Gravestone Doji (bearish)

Reality:

Pattern

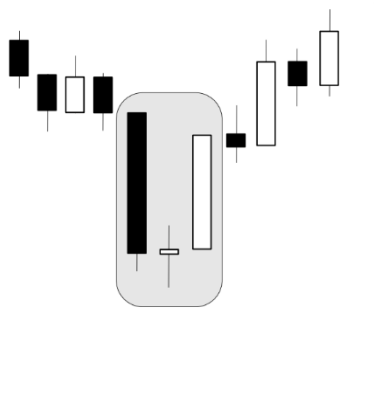

Conditions:

- occurs after a price increase
- it's a Shooting Star with a smaller candle body

Chart

Morning (Doji) Star (bullish)

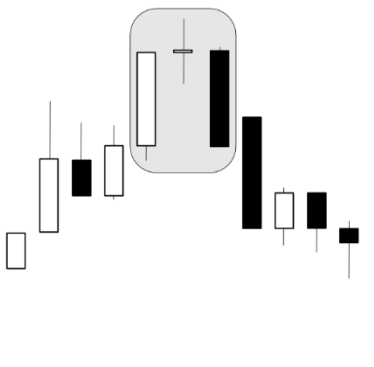

Pattern

Downtrend: occurs after a price decline
 First candle: strong bearish candle
 Second candle: Doji
 Third candle: strong bullish candle

Conditions

Evening (Doji) Star (bearish)

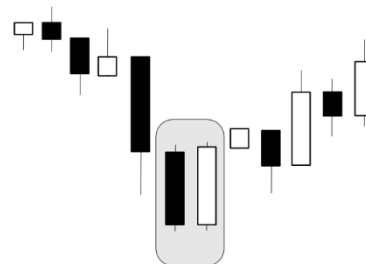

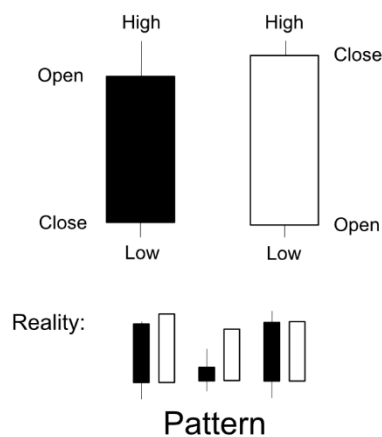

Pattern

Uptrend: occurs after a price increase
 First candle: strong bullish candle
 Second candle: Doji
 Third candle: strong bearish candle

Conditions

Bullish Engulfing Pattern (bullish)

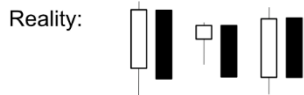

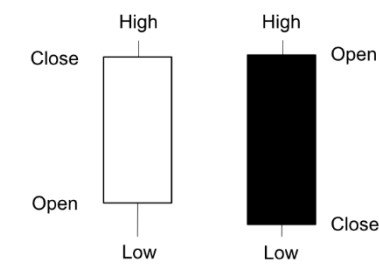

Conditions:

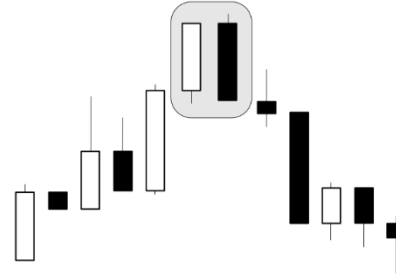

- occurs after a price decline
- bearish candle is followed by a bullish candle
- the body of the bullish candle fully contains the body of the bearish candle

Chart

Bearish Engulfing Pattern (bearish)

Pattern

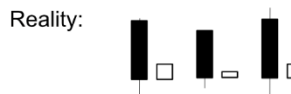

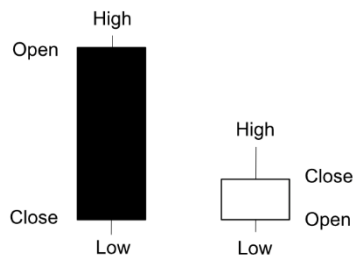

Conditions:

- occurs after a price increase
- bullish candle is followed by a bearish candle
- the body of the bearish candle fully contains the body of the bullish candle

Chart

Bullish Harami (bullish)

Pattern

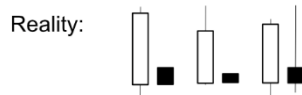

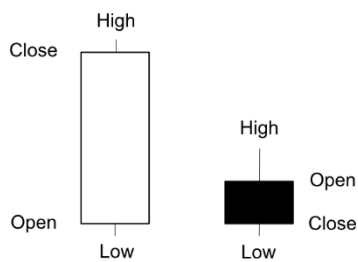

Conditions:

- occurs after a price decline
- bearish candle is followed by a small bullish candle, less than 4x its body

Chart

Bearish Harami (bearish)

Pattern

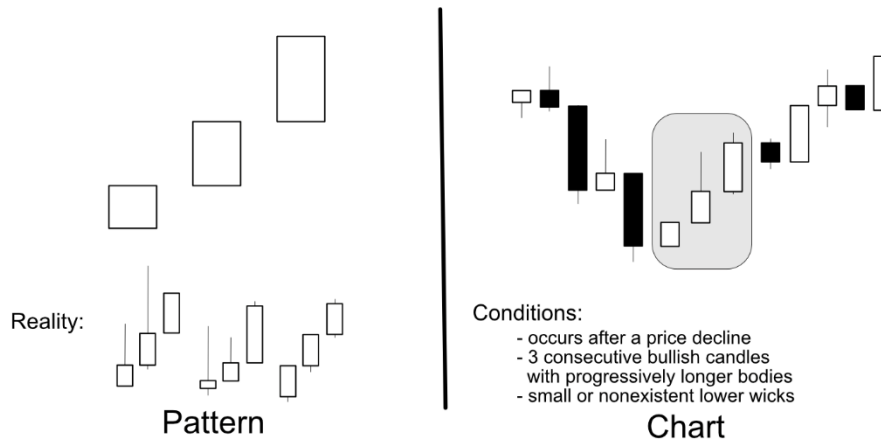

Conditions:

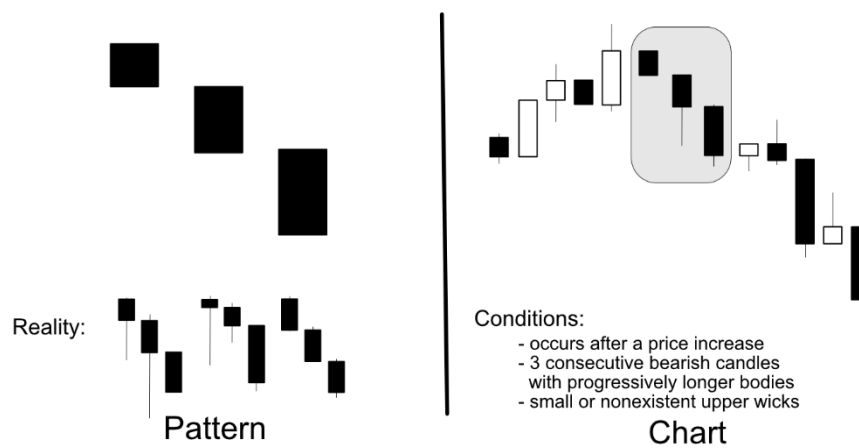

- occurs after a price increase
- bullish candle is followed by a bearish candle, less than 4x its body

Chart

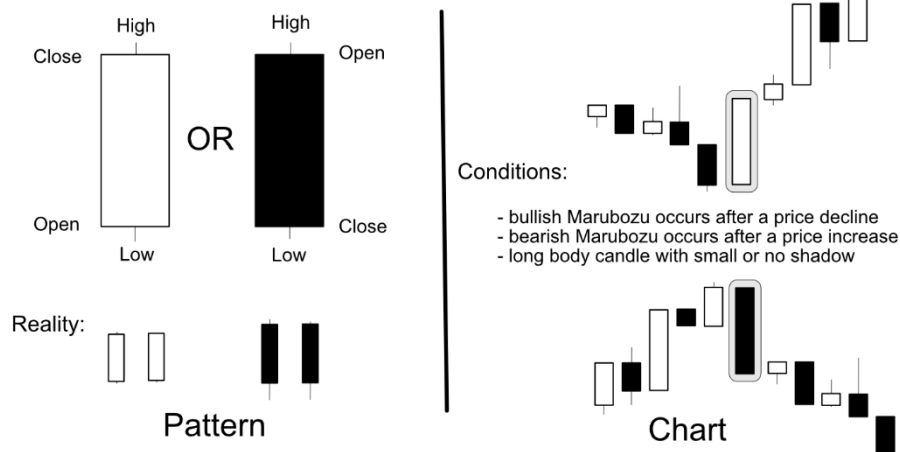

Three White Soldiers (bullish)

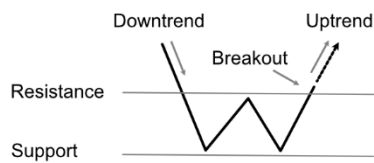

Three Black Crows (bearish)

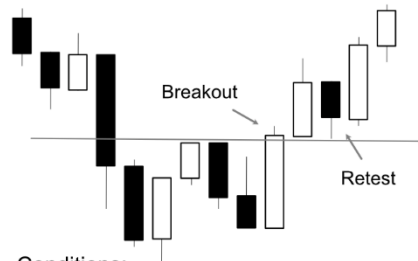

Marubozu (bullish or bearish)

Double Bottom (bullish)

Pattern

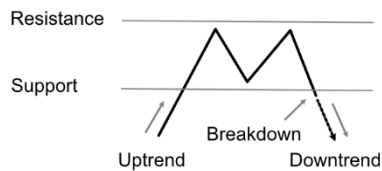

Conditions:

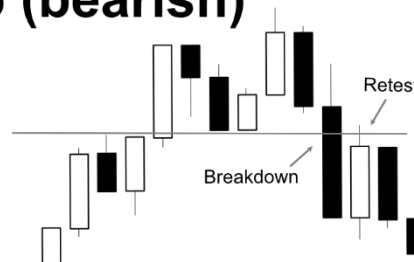

- occurs after a price decline
- price tests a support area and gets rejected
- it tests that area again and gets rejected again forming a second bottom (sometimes, even a third)
- and then it breaks over the resistance line (sometimes retesting it)

Chart

Double Top (bearish)

Pattern

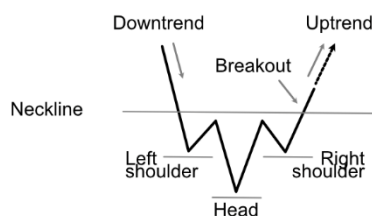

Conditions:

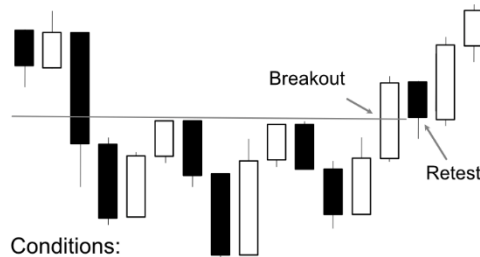

- occurs after a price increase
- price tests a resistance area and gets rejected
- it tests that area again and gets rejected again forming a second top (sometimes, even a third)
- and then it breaks down under the support line (sometimes retesting it)

Chart

Inverted Head and Shoulders (bullish)

Pattern

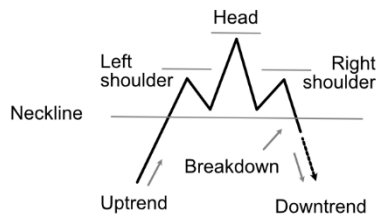

Conditions:

- occurs after a price decline
- price tests a support area (left shoulder) and gets rejected; it then breaks that area, tests a lower one (head) and gets rejected, and then, it tries to test the initial support area and it gets rejected (right shoulder)
- finally, it breaks over the resistance line (neckline), and sometimes it retests it

Chart

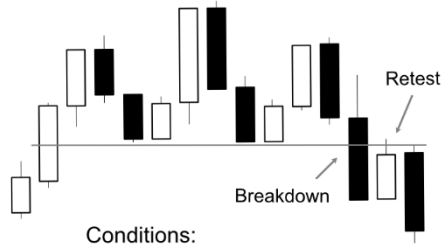

Head and Shoulders (bearish)

Reality:

Pattern

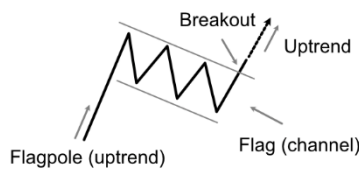

Conditions:

- occurs after a price incline
- price tests a resistance area (left shoulder) and gets rejected; it then breaks that area, tests a higher one (head) and gets rejected, and then, it tries to test the initial resistance area again, and it gets rejected (right shoulder)
- finally, it breaks over the support line (neckline), sometimes retesting it

Chart

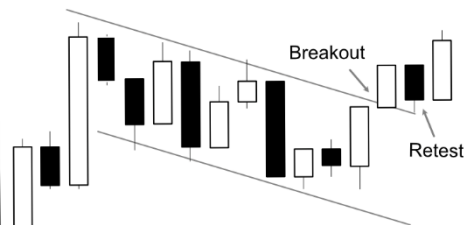

Bull Flag (bullish)

Reality:

Pattern

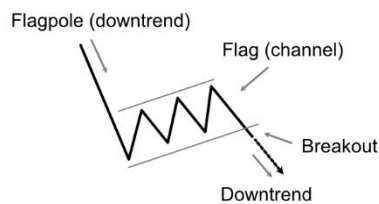

Conditions:

- occurs after a strong price incline (the flagpole)
- price consolidates in a downward slope, following parallel diagonal support and resistance lines
- price breaks the resistance line (optionally retesting it)

Chart

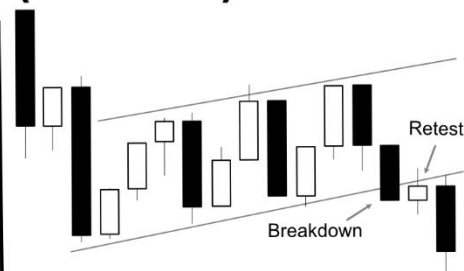

Bear Flag (bearish)

Reality:

Pattern

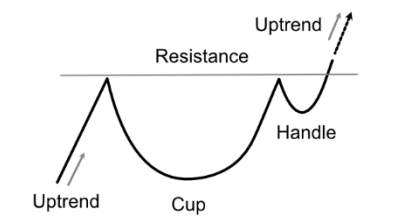

Conditions:

- occurs after a strong price decline (the flagpole)
- price consolidates in an upward slope, following parallel diagonal support and resistance lines
- price breaks the support line (optionally retesting it)

Chart

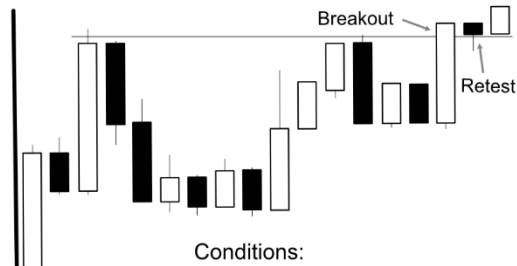

Cup and Handle (bullish)

Reality:

Pattern

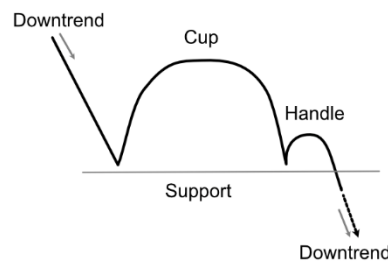

Conditions:

- occurs after a strong price incline
- the price falls into a rounded bottom (the cup)
- then it starts to rise, hits the initial resistance line and consolidates in a downward slope (the handle)
- afterward, it breaks out of the pattern (optionally retesting the new support)

Chart

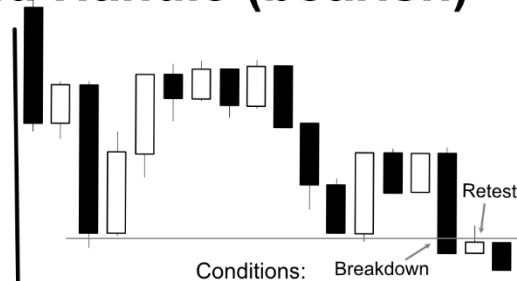

Inverted Cup and Handle (bearish)

Reality:

Pattern

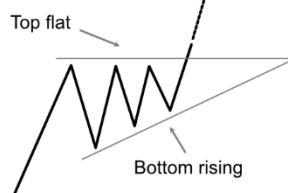

Conditions:

- occurs after a strong price decline
- the price rises into a rounded top (inverted cup)
- then it starts to fall, hits the initial support line and consolidates in an upward slope (inverted handle)
- afterward, it breaks out of the pattern (optionally retesting the new resistance)

Chart

Ascending Triangle

Conditions:
Ascending and Descending Triangles:

- price keeps hitting a resistance (or support) area while the other side gets closer to the convergence of the triangle
- then it breaks out of the triangle on that resistance (or support line), sometimes retesting it

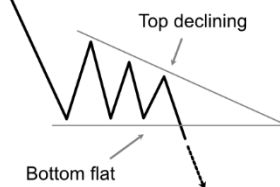

Symmetrical Triangles:

- same as above, but price makes lower highs and higher lows indicating indecision or consolidation
- after which it breaks out on either side

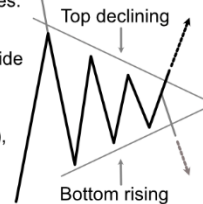

(Symmetrical) Expanding Triangles:

- price moves between the diverging trend lines making higher highs and lower lows (volatility and uncertainty)
- price breaks out on either side, usually on the side it came from

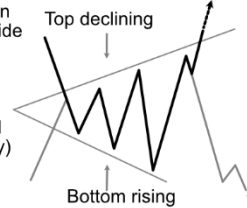

Descending Triangle

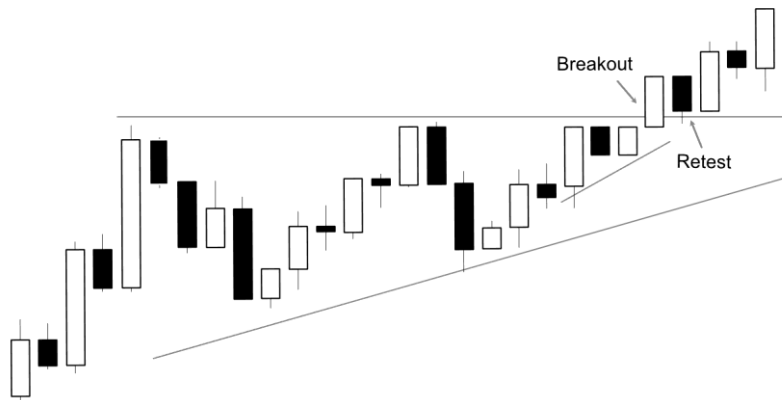

Symmetrical Triangle

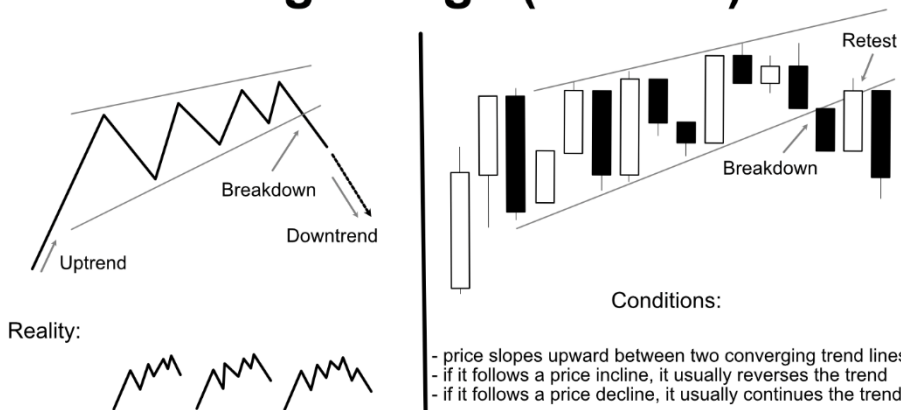

Expanding Triangle

Ascending Triangle (bullish)

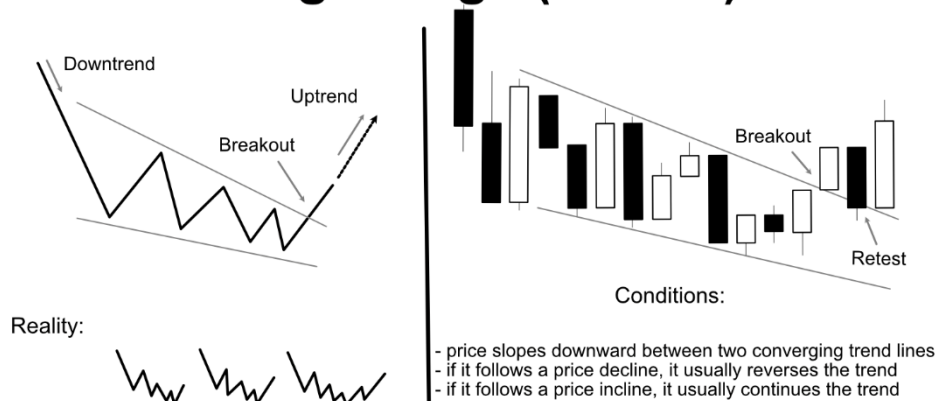

Rising Wedge (bearish)

Pattern

Chart

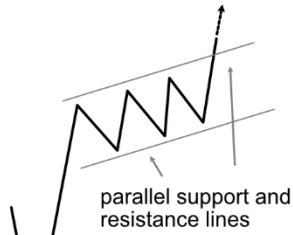

Falling Wedge (bullish)

Pattern

Chart

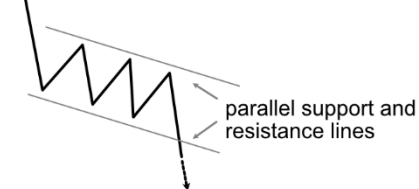

Ascending (Parallel) Channel (Bullish Rectangle)

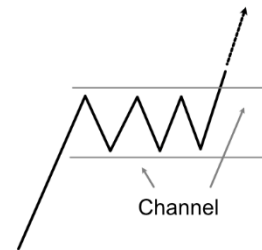

Conditions:

- price bounces between two parallel trendlines
- they can slope upward, downward or horizontal
- price usually follows the bouncing pattern
- until it breaks out of it, usually continuing the trend (and sometimes retesting the trendline)

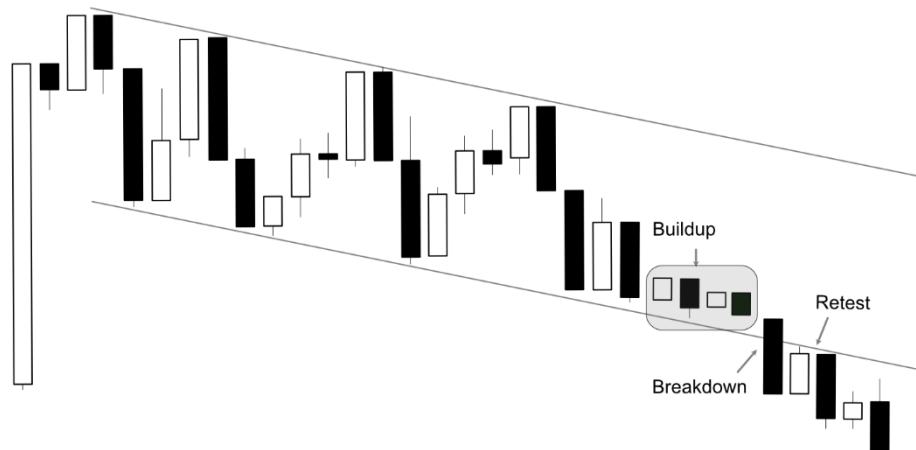

Descending (Parallel) Channel (Bearish Rectangle)

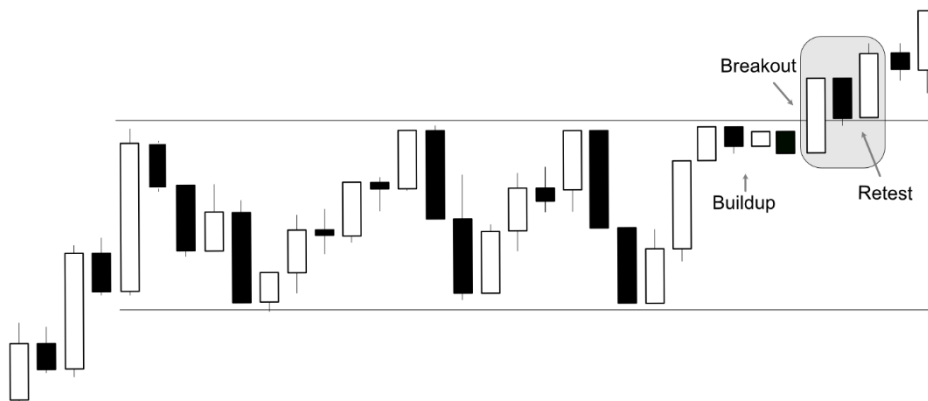

Horizontal (Parallel) Channel

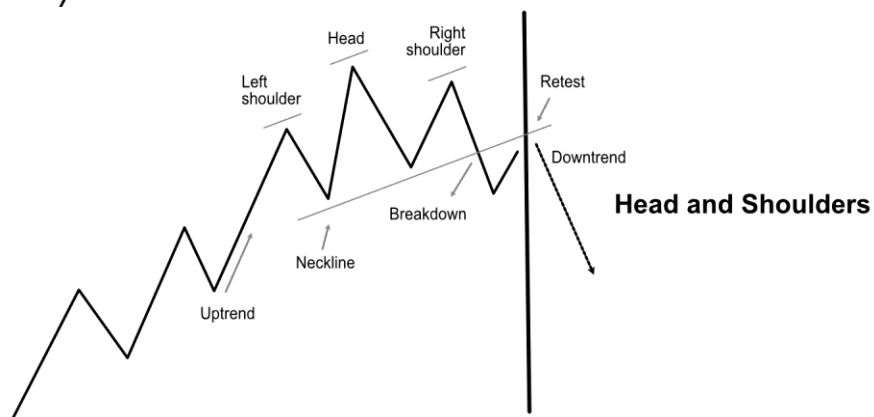

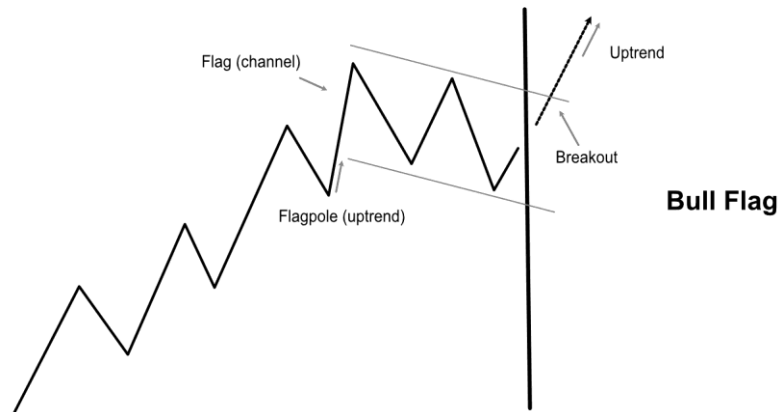

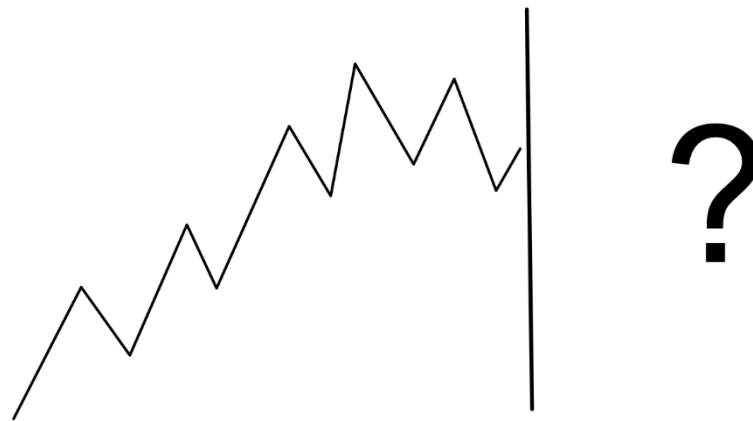

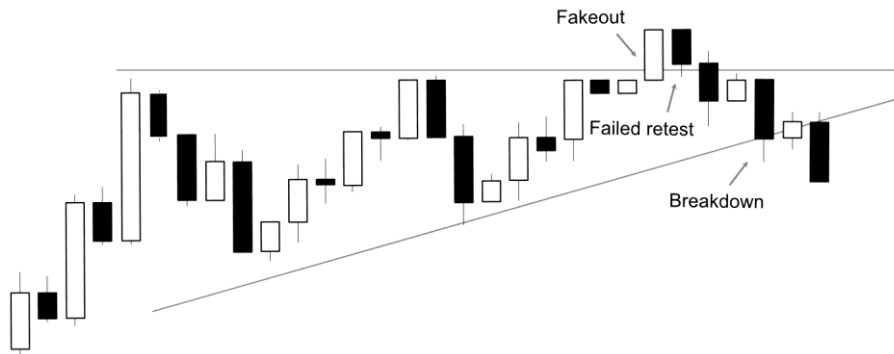

Descending Rectangle + Buildup + Breakdown

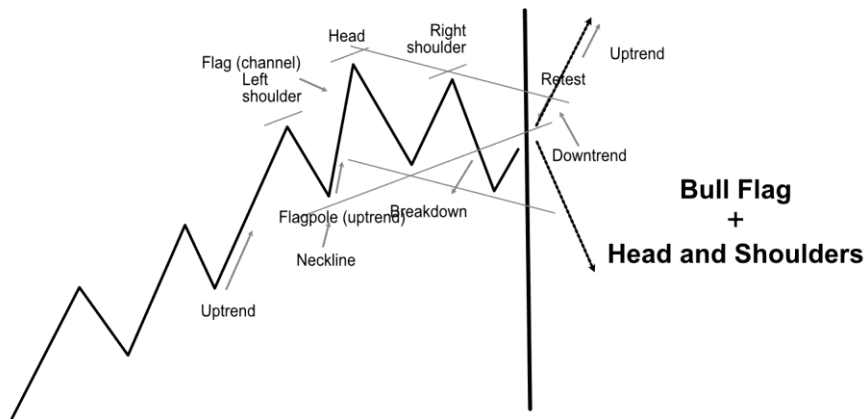

Horizontal Channel + Buildup

Ascending Triangle+ Fakeout + Breakdown

Chapter08: Automated Trading

Walk me through this code:

```
//@version=5
indicator(title="Hull Moving Average", shorttitle="HMA", overlay=true, timeframe="",
timeframe_gaps=true)
length = input.int(9, minval=1)
src = input(close, title="Source")
hullma = ta.wma(2*ta.wma(src, length/2)-ta.wma(src, length), math.floor(math.sqrt(length)))
plot(hullma)
```

This Pine Script code is calculating the Hull Moving Average (HMA) for a given length and then plotting it on the chart. Let's break down the code to understand it better.

1. ``//@version=5``

This line defines the version of Pine Script that is being used. In this case, it's version 5.

2. ``indicator(title="Hull Moving Average", shorttitle="HMA", overlay=true, timeframe="", timeframe_gaps=true)``

This function creates a new indicator with the full title "Hull Moving Average" and short

Overview Performance Summary List of Trades Properties

The chart displays the distribution of the number of nodes in the network. The x-axis represents the number of nodes (1 to 11), and the y-axis represents the count (0.00 to 3000000000.00). The distribution is highly skewed, with a very large number of nodes having 10 or 11 nodes.

Number of Nodes	Count (Approximate)
1	~100000000.00
2	~100000000.00
3	~100000000.00

Introduction

Freqtrade is a free and open source crypto trading bot written in Python. It is designed to support all major exchanges and be controlled via Telegram or webUI. It contains backtesting, plotting and money management tools as well as strategy optimization by machine learning.

DISCLAIMER

This software is for educational purposes only. Do not risk money which you are afraid to lose. USE THE SOFTWARE AT YOUR OWN RISK. THE AUTHORS AND ALL AFFILIATES ASSUME NO RESPONSIBILITY FOR YOUR TRADING RESULTS.

Always start by running a trading bot in Dry-run and do not engage money before you understand how it works and what profit/loss you should expect.

We strongly recommend you to have basic coding skills and Python knowledge. Do not hesitate to read the source code and understand the mechanisms of this bot, algorithms and techniques implemented in it.
